Urges X-Rays, Photos Be Used to Back Warren Report on JFK

NEW YORK — (UPI) — The examination of X-rays and photographs of President John F. Kennedy's body by a committee of scholars and doctors to back up the Warren Commission's findings is proposed in the current issue of the Nation.

An article by Jacob Cohen, a Yale history teacher turned freelance writer, suggested the examination of the pictures and X-rays as a way to support the commission's finding that Lee Harvey Oswald alone assassinated Kennedy. Cohen said it was unclear if the Warren Commission ever requested and got the X-rays and that several commisison lawyers told him Sen. Robert F. Kennedy had requested the pictures and X-rays not be published.
